you can link to your accounts. Navigation It seemed every day I read a new account of someone hitting the back button on a finances web site - from a driver who drove past his local Family First center to a helicopter pilot who was happily accepting work from a travel company. Then the servers dropped and I didn't have a choice but to consume the free adoptees or go to \$20 per month to read about the developers of a website. So I wrote my own. Well, I didn't write it myself I did add a lot of the content from other people's sites but if you want to find where the content is from please

technology at Intelligent Networked Learning. It seems like the House's new health care plan has something for everyone – except those people out there who actually have health insurance. The Republican alternative to Obama's Affordable Care Act, passed by a margin of 219 to 195, might actually be as expensive as Obamacare. While some could argue that the new plan is a “budget-reconciliation plan” rather than a “budget-reconciliation resolution” – so, it's a budget deal, not a budget resolution – it does not have to comply with the Senate's budget rules. How big is the tax hike in the

---

Republican plan? The Congressional Budget Office estimated that it would increase federal deficits by \$337 billion over 10 years. What about the billions in lost coverage? CBO estimates that the new plan would reduce the number of people with insurance by 18 million – or about 20

Q: How to delete a specific pdf page in ghostscript? I am trying to delete only the upper part of a PDF page so that it does not print. For instance, I want to remove the first 500 pixels from the top (and bottom) of every page in a PDF, so that I can remove all the media components in the PDF. I tried

---

changing the PDFFitPageMargins option in Ghostscript, but I only found the margin options and nothing else. Is there any way to do this? I have been working on this problem for two days with no luck. A: I found the answer: Use PDFFitPageMargins option in Ghostscript with:

PDFFitPageMargins = -600 A: How about using the pdffit pdffit -pdf test.pdf -p test.pdf -newpage 1 that will do what you need: If you want to keep the first and last page of test.pdf, that is -split, not -newpage. The first and last page still contain the pagemargins (as they do in the input file). For more info, see the

pdfunite man page. Q: In what cases will a generic member function with parameterized template as a return type be better than calling a member function? Let's say I want to do something like: `function get(data: T): T; function get(data: { a: T }) { return data.a; }` I'm fairly sure that in all cases this is better than doing: `function get(data: T): T { return data; }` My question is, how can I usefully decide whether a generic return member function is better in these scenarios? A: Well, the return type of the `get` function is not helpful at all, and you are fighting against TypeScript's limitations. `get("aaaa")`

will be equivalent to `get("aaaa")`  
according to
